

Project Title: Immersive Community, Culture, and Care Experiences for Undergraduate Nursing Students: The 360-Degree Difference

Title Deliverable #3: Community Health Nursing Virtual Reality (VR) Case

Please follow the instructions below for the use of the VR simulation for nursing students studying Community Health Nursing.

1. Nursing faculty, please review the debrief form which was created to guide faculty in debriefing the case with students. It may help to review this first so that you can watch the video, or understand moderator prompts, knowing expected dialogue.
2. Have students watch the pre-brief video prior to the simulation.
3. Have students complete the Community Health Nursing Pre-test.
4. Watch the recorded VR case online, or contact SimX at sales@simxar.com for free access to our community health nurse experience. Access through SimX will require the nursing school to have access to an appropriate VR headset (e.g., Oculus Quest or a HTC Vive Focus).
5. After the video, have students gather for a guided debrief with the facilitator. After the debrief students can then take the Community Health Nursing post-test.
