Glass beads as a tool to study trade networks in Northeastern America: archaeological and archaeometrical aspects

Dr. Adelphine Bonneau
Postdoctoral Fellow in Historical Sciences
Université Laval
Quebec City

Thursday, June 15
12:00 pm

Science Complex 158

Dessert will be provided

Come learn about how chemical analysis of glass beads helps archaeologists understand how people traded goods and networked in colonial North America. Dr. Bonneau completed her D. Phil. degree in archaeological science at the Research Laboratory for Archaeology at Oxford, and is currently a postdoctoral fellow at Laval University in Canada. Her research interests also include radiocarbon dating of rock paintings and archaeometry in general.
