--	---	---	--

While International Students are special in many ways, when taking a snapshot view of our students, I learned they are extremely bright! The **average GPA's** are:

** Undergraduates: 3.3

** Masters/Grad Cert: 3.6

** Doctoral: 3.7

Revenue

While not the most important reason to have a large number of international students, the fact most of them pay non-resident tuition can't be overlooked. In the **fall of 2014**, we had 752 international students registered for class; the others were on OPT or medical leave.

Ed Level	# of Students registered FA14	Credit Hours	FA14 Approx. Revenue*	# Students registered SU15	Credit Hours	SU15 Approx. Revenue*
Undergraduate	381	5301	\$ 2.178 million	175	1256	\$ 516K
Graduate	371	3109	\$ 2.034 million	143	599	\$ 392K
Total	752	8410	\$ 4.212 million	318	1855	\$ 908K

Doubling for two terms, fall & winter, and then adding in summer, **we can estimate that international students generate more than \$ 9 million dollars annually** for EMU.

* Using the tuition calculator on the EMU website, assuming business courses.

A Historical Perspective

VISA Types

- 10% drop in number of Int'l Students attending EMU
 - Largest percentage fall in exchange program students (-29%)
 - Largest number decrease was seen in F1 students (-87)

Colleges

- For the second year in a row, the **College of Arts and Sciences** surpassed the College of Business in enrolling the largest total number of Int'l students (307)
- The **College of Business** experienced the greatest loss (-132, -33%)
- The **College of Technology** also experienced a decrease (-48, -23%)
- The other Colleges saw some limited growth

Education Level

- We seem to be experiencing a shift from **graduate** students being the largest population, to a more even spread between the grads and **undergrads**
- The **IEP program** had a great start in their early years, but have experience quite a decline over the last two years. This may be attributed to the pricing model being used as most of our competitors programs are much less expensive

Gender

- We have shifted from a greater number of **males**, to a greater number of **females** (47%/53%)

Country of Origin

- **India** still remains our largest country of origin, however they have dropped from 32% to 23% of our student population
- As you would expect, we have seen a significant growth in our students from **Saudi Arabia** (103 to 150) and **China** (166 to 210) across the 6 year period. However, in 2014, even with the largest influx of Chinese students coming to the USA to study, we **lost ground, going from 226 to 210 in 2014**, for a loss of 16 students.
- The number of students from South Korea and Canada have remained relatively flat across these years.

Major

- The majority of students continue to study **accounting, finance, computer information systems and business administration.**
- **Computer science** has grown from only 45 students in 2009, to 91 students in 2014; this is likely attributable to the **STEM** Extension eligibility of that major, and not computer information systems, who dropped from 93 students in 2009 to 81 in 2014.
- **Computer aided engineering** has dropped from the 7th ranked major in 2009 to the bottom of the list, with no CAE majors in 2013 or 2014
- **Engineering Management** is also seeing a decrease (from 52 to 25)
- However, **Engineering Technology** (undergraduate programs) went from no students in 2009 – 2012 to 27 students in 2013 & 2014.
